

Part1:

The screenshot shows the Eclipse IDE with a project named 'Assignment2' and a package 'Part1'. The file 'Leibniz.java' is open, showing the following code:

```
1 public class Leibniz {
2     Assignment2/Part1/Leibniz.java
3     public static double estimatePi(int iterations) {
4         double sum = 0.0;
5         for (int n = 0; n < iterations; n++) {
6             // (-1)^n / (2n+1)
7             double term = Math.pow(-1, n) / (2 * n + 1);
8             sum += term;
9         }
10        return 4 * sum;
11    }
12
13    public static void main(String[] args) {
14        int iterations = 0;
15        double piEstimate = 0.0;
16
17        do {
18            iterations++;
19            piEstimate = estimatePi(iterations);
20        } while (Math.abs(Math.PI - piEstimate) > 1e-5);
21
22        System.out.printf("pi is estimated as %.5f after %d iterations\n", piEstimate, iterations);
23    }
24 }
25
```

The bottom of the IDE shows the 'Console' tab with the following output:

```
<terminated> Leibniz [Java Application] D:\eclipse-java-2025-06-R-win32-x86_64\eclipse\plugins\org.eclipse.justj.openjdk.hotspot
pi is estimated as 3.14160 after 100001 iterations
```

Part2:

```
